EXPERIENCE

Front End developer

Oreyeon

May 2023 - Present, Beirut

- Building an internal tool for the organization.
- Plan and discuss new features with the stakeholders.
- Utilized the new next 13 app router with server components and actions, and implemented Typescript and Zod to ensure full type safety across the entire project.
- I also used react query for some use cases that aren't doable with server components.
- Used Tailwind and Shadcn for styling and UI.

Full Stack Developer Intern

Ajjerni

October 2022 - January 2023, Remote

- Contributed to the growth and development of the rental website platform.
- Fixed various bugs across the frontend and backend.
- Added and edited various components throughout the frontend.
- Introduced a new insurance fee feature to the pricing system.
- Optimized authorization process to align with introduced features, implemented ID verification system for users to complete the rental process securely, and introduced a new insurance fee feature to the pricing system.
- We used Next, typescript, react query and tailwind for the frontend, and Strapi, a Node.js framework, for the backend.

Full Stack Developer Intern

Fattal Group

May 2022 - July 2022, Beirut

- Modernized and turned their outdated desktop application for salesforce operations into a web application using cutting-edge technologies.
- Implemented an authentication and authorization system.
- Used Vue.js with Vuex for the backend, and .NET Api Core for the backend.
- Developed an admin panel for all the operations across multiple companies under Fattal Group.
- Had the chance to work with multiple departments and gained valuable insights into the operations of a large company.

Frontend Developer

EXMNA

August 2021 - April 2022, Remote

- Transitioned the website from Wordpress to Nuxt.js.
- Implemented various Figma designs.
- Acquired basic frontend and JavaScript fundamentals during my time there.
